3.1 Multi-Factor Authentication (MFA)

3.2 Password Confidentiality

3.3 Password Managers

3.4 Device Security

3.5 Incident Reporting

4. Compliance

1.1 Purpose

The purpose of this policy is to establish standards for creating, managing, and protecting passwords to safeguard personal and organizational digital assets. Effective password management reduces the risk of unauthorized access, data breaches, and cyber threats.

1.2 Scope

This policy applies to all accounts, systems, and devices used for personal computing or within a company environment, including:

- User accounts (email, applications, subscriptions)
- Workstations and laptops
- Mobile devices
- Cloud services and online platforms

Password Requirements

All passwords must meet the following criteria:

#	Requirement	Details
1	Minimum length	Minimum length: 12 characters
2	Must include	Must include a combination of: Uppercase letters (A-Z), Lowercase letters (a-z), Numbers (0-9), Special characters (e.g., !, @, #, \$)
3	Uniqueness	Passwords must be unique for each account
4	No personal info	Avoid using easily guessed words or personal information
5	Regular rotation	Passwords must be changed every 90 days or immediately if compromised

Additional Security Measures

- Enable multi-factor authentication (MFA) wherever possible
- Never share passwords with anyone, including coworkers or family
- Use a secure password manager to store and generate passwords
- Lock devices when unattended
- Report any suspected password compromise immediately

Compliance

Adherence to this policy is mandatory. Failure to comply may result in unauthorized access, data loss, or security incidents. Users are responsible for understanding and implementing these standards.
